

If never-before seen malware infects your system, how will you know?

Comprehensive cybersecurity for SMEs

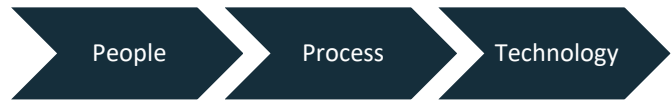

Everyone tries to predict what criminals will do next. Unfortunately, as we keep seeing in the news, ransomware attacks are on the rise, with no end in sight.

How are we different? We review all the activity on your systems and must confirm it's legitimate and expected. Our team of experts analyze anything that doesn't meet those criteria, and we respond swiftly to protect your business.

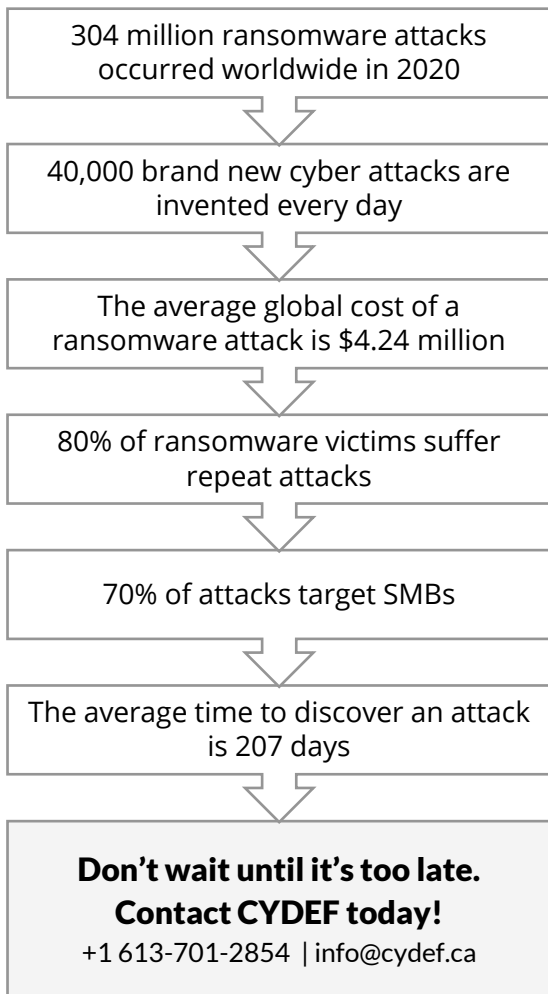

Our list of safe activities grows exponentially with every device we protect, benefiting all CYDEF clients.

This unique approach, along with combination of machine learning and human analysis, makes our solution truly revolutionary.

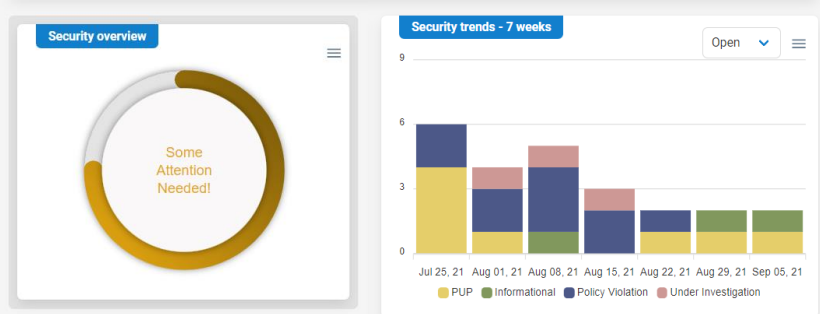

It gets better: You barely need to lift a finger. We provide the people, process, and technology as a turnkey service.

Why is cybersecurity protection critical?

You'll have peace of mind with our fully managed services

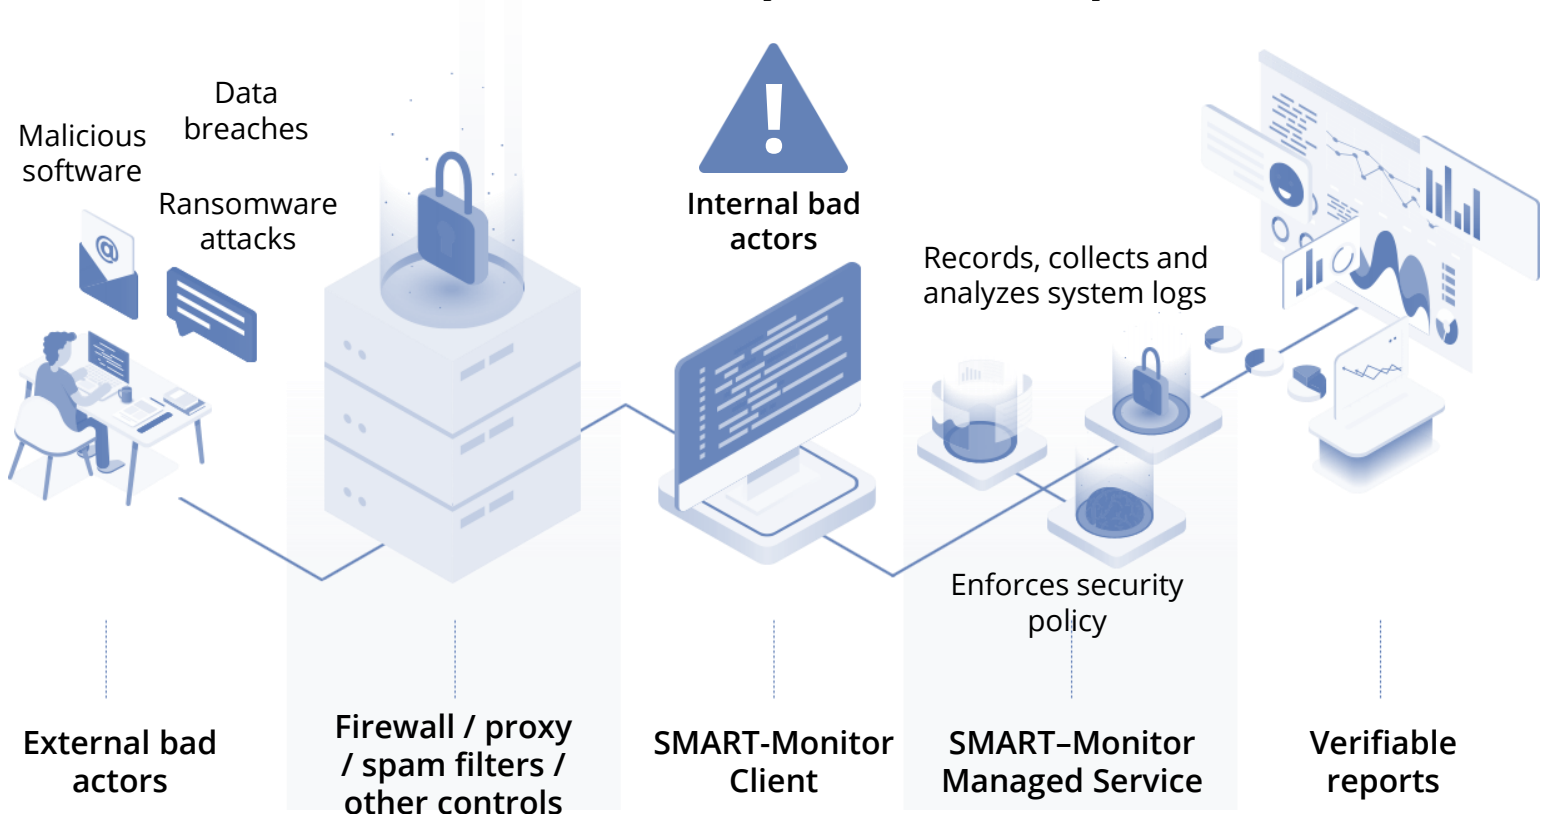

CYDEF's cyber threat detection technology, provided as a managed service, gives you peace of mind. We have the expertise to monitor your devices and operate the technology to ensure you're always protected. But don't take our word for it: we provide you with dashboards, reports, and tools to review the incidents we responded to. You also have access to the data we collect and the decision we make. Why? First, it's your data. Secondly, you can see how we work, understand what's going on in your environment, and get recommendations to improve.

Your organization will benefit from:

- A cost-effective, turnkey solution that won't strain your IT department or require cybersecurity expertise
- Time saved due to near zero false positive reports
- A focus on confirmed incidents and policy violations with near zero false positives
- Efficient and proactive security operations with client pre-approved actions that include isolation and quarantine
- CYDEF's state-of-the-art "Zero Trust" model
- Detailed incident reports with relevant forensic details
- Lightweight, cloud-based agent
- User-friendly dashboards
- No performance degradation
- Easy installation; no additional hardware required
- Compatibility with older hardware
- Compatibility with Windows and Mac
- Verifiable process that you can audit
- Functional from day-one, no baseline required
- Incredible support from a knowledgeable team
- Activity and incident data is retained for the duration of the subscription
- 24/7 protection

Verifiable cybersecurity
